

STACKING TEMPLATE

The following template is only a guide to help you design a policy for your specific site needs. Please follow all provincial legislation regarding stacking.

1. Ensure you use a flat firm surface when stacking lumber.
2. Pulpwood and log piles should be not be stacked higher than 4 m high.
3. During spring ensure stability of log and pulpwood piles as snow underneath melts.
4. Place sticks underneath lumber piles to allow easy pick up by forklifts.
5. Lifts of lumber should only be stacked to a maximum of 4 lifts high.
6. Taper edges of log and pulpwood piles to prevent wood from falling.
7. Ensure stacks are straight, neat and not leaning.
8. Do not climb on stacks.
9. Only equipment operator allowed on stacking equipment while in operation.
10. No one is allowed around stacks while equipment is in operation.
11. All stacking equipment should be inspected regularly and in good repair.
12. Ensure equipment is operating within its load limits.
13. Ensure stacking equipment is free from debris to reduce fire hazards.
14. Hydraulic leaks on equipment need to be fixed immediately.
15. Equipment operators should have a valid power line hazard certificate for the province of Newfoundland and Labrador.
